recipient of the jo anne stolaroff cotsen prize this volume publishes the excavation and analysis of the early iron age cemetery at torone in chalkidike in the north aegean greece spanning the period between the twelfth or eleventh century down to ca 850 bc the cemetery represents one of the few burial grounds of the period in greece to have been excavated virtually in its entirety yielding 134 tombs of which 118 were cremations and 16 inhumations

geometric topology is a foundational component of modern mathematics involving the study of spacial properties and invariants of familiar objects such as manifolds and complexes this volume which is intended both as an introduction to the subject and as a wide ranging resouce for those already grounded in it consists of 21 expository surveys written by leading experts and covering active areas of current research they provide the reader with an up to date overview of this flourishing branch of mathematics

the author proposes a general mechanism by which strange non chaotic attractors sna are created during the collision of invariant curves in quasiperiodically forced systems this mechanism and its implementation in different models is first discussed on an heuristic level and by means of simulations in the considered examples a stable and an unstable invariant circle undergo a saddle node bifurcation but instead of a neutral invariant curve there exists a strange non chaotic attractor repeller pair at the bifurcation point this process is accompanied by a very characteristic behaviour of the invariant curves prior to their collision which the author calls exponential evolution of peaks
